New Bosch OE fuel rail added

*DURABILITY,
PERFORMANCE, FUEL EFFICIENCY*

Reman 6.7 Injectors

These are remanufactured injectors carrying a 24-month unlimited warranty. Injectors are fully sealed and ready for installation with O-rings and copper washers included.

6.7 High pressure tubes and lines

The tubes and high-pressure lines should always be changed due to erosion from continuous high pressure and heat, re-using the old tubes can lead to leaks, contamination, and premature injector failure.

6.7 Valve cover gasket/wiring harness, intake gasket and hold down bolts

Replace single-use parts as required when removing the valve cover. The wiring harness provides new connections both under the valve cover and externally, while bolts become stretched after reuse and are prone to loosening.

6.7 High pressure fuel rail

Brand new OE Bosch fuel rail with new OE RPS and excess pressure relief valve. Reusing old rails leads to the contamination of new injectors with captured metal particles possibly seizing injectors and leading to A catastrophic failure.
